PROFESSIONAL SUMMARY

Final-year Information Technology undergraduate (SLIIT, expected 2026) with hands-on full-stack software engineering experience and academic knowledge of Node.js, Java, and Python. Skilled in building RESTful APIs and microservices with Node.js/Express.js, Flask, and FastAPI, and developing responsive front-end applications with React.js. Contributed across the full development lifecycle as an AI/ML Engineer Intern at SLT Mobitel, including design, coding, testing, debugging, and deployment of production pipelines. Comfortable with secure coding practices (JWT authentication, bcrypt hashing, environment-based secrets management, role-based access control) and version-controlled, team-based Agile workflows using Git/GitHub. Strong problem-solving ability, quick to learn new frameworks and tools, and confident communicating in English, both written and verbal.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, SQL

Full-Stack Frameworks: Node.js, Express.js, React.js, Next.js, Spring Boot (Java), FastAPI, Flask

Backend & APIs: RESTful API Development, Microservices Architecture, JWT Authentication, API Integration, Gunicorn, Firebase

Databases: PostgreSQL, MySQL, MongoDB, SQLite

Software Engineering Practices: Software Development Lifecycle (SDLC), Testing & Debugging, Secure Coding Practices, Agile/Team Collaboration, Code Review

Cloud, DevOps & Tools: AWS (Boto3), Docker (Basic), Git, GitHub, Postman, Visual Studio Code, Virtual Environments (venv), Linux (Basic), Windows

AI/ML (Applied): Natural Language Processing, Sentiment Analysis, Transformer Models (Hugging Face), Computer Vision (OpenCV, MediaPipe, DeepFace)

WORK EXPERIENCE

Intern AI/ML Engineer | SLT Mobitel

Sep 2025 – Mar 2026

- Contributed across the full development lifecycle — design, coding, testing, and debugging — building an end-to-end sentiment analysis pipeline with Python, Flask, and Gunicorn, integrating AWS Boto3 and audio-processing libraries (Librosa, NumPy).
- Wrote well-designed, testable Python code for a real-time multi-face emotion recognition system using OpenCV and DeepFace; verified functionality live at the National AI Expo & Conference 2025 under event-scale load.
- Built and debugged "Gesture Drive," a real-time gesture-controlled application using Flask, OpenCV, and MediaPipe, showcased live at TECHNO 2025 (BMICH), ensuring designs met functional specifications under demo conditions.
- Investigated and applied emerging AI frameworks and agent-based workflow tools during the Agentic AI Hackathon with IBM watsonx Orchestrate (lablab.ai), supporting continuous improvement through new-technology evaluation.

RESEARCH EXPERIENCE

CogniAnimate: An AI-Driven Cognitive-State-Aware Visual Learning System for Grade 6 Science Education

Independent Academic Research Project

- Designed and developed interactive 2D/3D educational visualization prototypes (Solar System, Gravity) using HTML5 Canvas, JavaScript, WebGL, and GLSL shaders, applying procedural generation techniques.
- Structured domain-specific concept data into a machine-readable format to support dynamic, data-driven content delivery for science learning modules.
- Researched and applied NLP concepts, including Hugging Face Transformers, to process and organize educational content, working independently across the full research-to-prototype lifecycle.

Technologies: JavaScript, HTML5 Canvas, WebGL, GLSL, Hugging Face Transformers

FULL-STACK PROJECTS

SAAGA Institute LMS — Full-Stack Learning Management System

- Designed, developed, and maintained a scalable, role-based LMS with Admin, Staff, and Student portals, building both the Next.js/React frontend and the backend REST API layer with MongoDB, across the full software lifecycle.
- Implemented secure coding practices — JWT authentication, HTTP-only cookies, bcrypt password hashing, environment-variable secrets management, and middleware-based least-privilege role authorization.
- Built and tested end-to-end RESTful modules for enrollment, QR-code attendance, payments, and reporting dashboards; collaborated with teammates in a shared Git repository following an Agile workflow.

Technologies: Next.js, TypeScript, React, Node.js, Tailwind CSS, MongoDB, JWT, bcrypt, Cloudinary

IntelliTask — Cross-Platform Personal Assistant

- Built a full-stack task-management application with a React.js UI integrated with a Node.js/Express.js REST API backend and MongoDB, following version-controlled, modular coding practices.
- Implemented secure authentication (JWT, bcrypt) and role management, and connected natural-language voice/text input handling between frontend and backend services.

Technologies: React.js, Node.js, Express.js, MongoDB, Google Speech API

Vikum Agro ERP & Supply Chain Management System

- Developed a full-stack enterprise ERP application for an agricultural company to manage the complete supply chain — from farmer/supplier onboarding and approval to inventory, warehouse, transport, finance, and customer order management.
- Designed and built the supplier portal, including an admin-reviewed registration/approval workflow, harvest-request submission, collection/transport scheduling, and a dashboard for harvest history, payments, earnings, and notifications.
- Built a comprehensive admin platform covering user, supplier, and employee management, crop collections, warehouse/inventory, customer and order processing, finance, reporting, notifications, and audit logs, following Clean Architecture with service and repository layers and JWT-secured REST APIs.

Technologies: React, TypeScript, Node.js, Express.js, MongoDB, JWT

YC Startup Scraper — Python Automation Pipeline

- Built a Python-based scraping and automation pipeline to extract structured data from 500+ startup records, with robust error handling and a CSV export pipeline for downstream analysis.

Technologies: Python, Selenium, Pandas, ChromeDriver

EDUCATION

BSc (Hons) in Information Technology — Sri Lanka Institute of Information Technology (SLIIT) | 2022 – 2026 (Expected)

Specialising in Information Technology

GCE Advanced Level — Physical Science Stream, Ananda College, Colombo | 2021/2022

Combined Mathematics: C | Physics: C | Chemistry: C

CERTIFICATIONS

- AI/ML Engineer Stage 1 & Stage 2 — SLIIT
- Getting Started with DevOps on AWS — Amazon Web Services
- AWS for Beginners — Great Learning
- Python for Beginners — CODL, University of Moratuwa
- Web Design for Beginners — CODL, University of Moratuwa

ACHIEVEMENTS & EXTRACURRICULAR ACTIVITIES

- National AI Expo & Conference 2025 — Represented SLT Mobitel and showcased live AI-based projects.
- TECHNO 2025 (BMICH) — Project Presenter for Gesture Drive, a computer-vision gesture-controlled game.
- Agentic AI Hackathon (lablab.ai / IBM watsonx) — Built AI-driven solutions in an international team competition.
- CodeArena 2025 — Finalist, Team: Null Pointers; demonstrated strong algorithmic problem-solving and teamwork.
- Ananda College — Member of Science Union, ICT Society, Aeronautical Society, and Robotics Society.
